Installing & Configuring Python in VS Code

Step 1: Install Python

1. Download Python from https://www.python.org/

2. Ensure 'Add Python to PATH' is checked during installation.

Step 2: Configure Python in VS Code

1. Open VS Code and install the Python extension.

2. Open a Python file and select the interpreter (Ctrl+Shift+P "Python: Select Interpreter").

Step 3: Verify Installation

1. Open VS Code terminal and run:

```
python --version
```
